Cumulative and daily COVID-19 doses administered to Milwaukee County residents

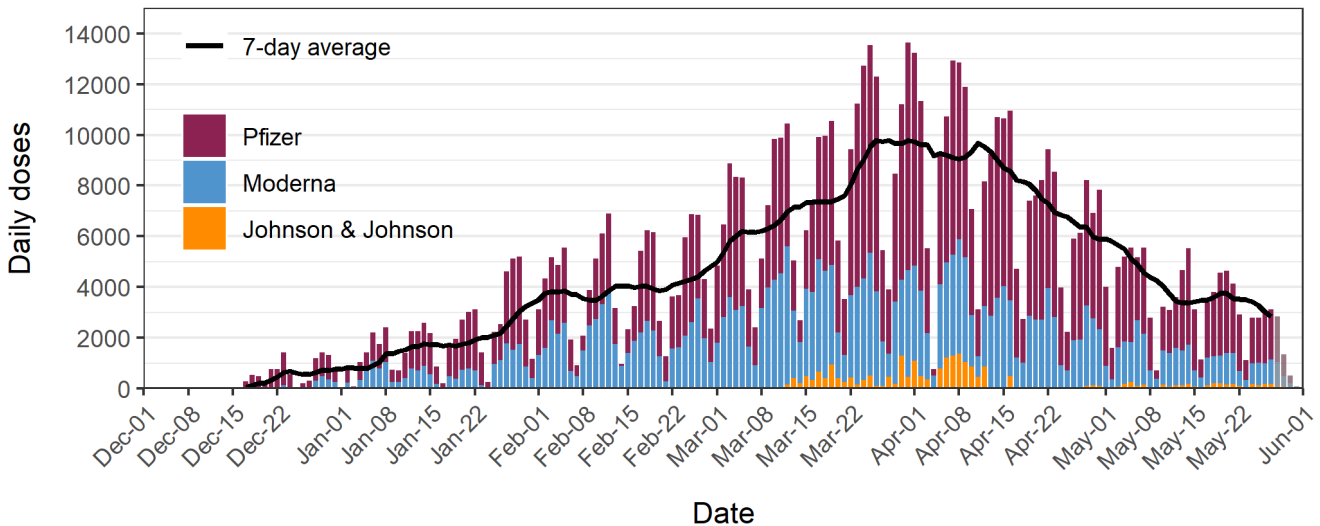

Figure 1 shows cumulative COVID-19 vaccine doses administered to Milwaukee County residents. A total of 773580 doses have been administered from December 15, 2020 through May 31, 2021. The light blue color represents the first dose in a series (Pfizer or Moderna). The dark blue color indicates a completion dose (first dose of Johnson & Johnson or second dose of Pfizer or Moderna). **Figure 2** shows daily COVID-19 vaccine doses administered to Milwaukee County residents. The overlaid black line shows the 7-day average of daily doses and the bars are colored by vaccine: Pfizer (red), Moderna (blue), and Johnson & Johnson (orange). Daily doses peaked in late March to early April and have since declined.

Percentages of first-doses of COVID-19 vaccine administered to Milwaukee County residents by age and race/ethnicity groups

Figure 7 shows the percentage of first-doses of COVID-19 vaccine administered per week to Milwaukee County residents by age group. After vaccines first became available to healthcare personnel, middle-aged groups (25-59) were the majority of new vaccinees. After eligibility opened up to ages 65+, the oldest two age groups became the majority. The younger age groups (< 60) have become the majority of people vaccinated since eligibility opened up to education staff on March 1st.

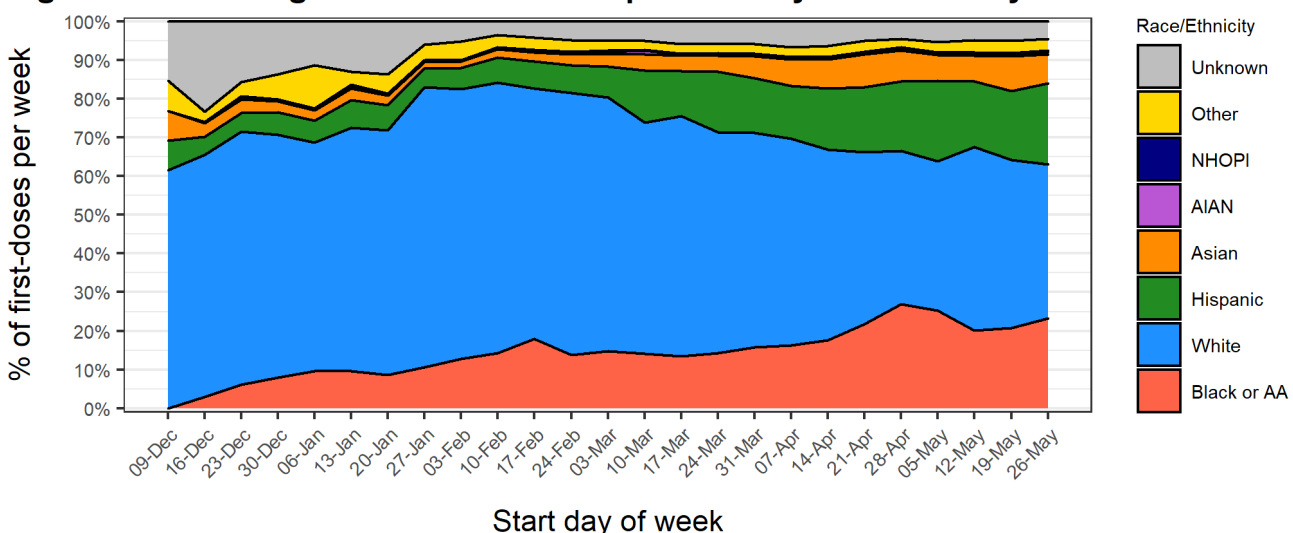

Figure 8 shows the percentage of first-doses of COVID-19 vaccine administered per week to Milwaukee County residents by race/ethnicity. Non-Hispanic Whites continue to make up the majority, however Black/AA, Hispanic, and Asian groups have become an increasing proportion of the newly vaccinated over time.

Completion of immunization series among Milwaukee County residents who received at least one dose of Pfizer or Moderna vaccines

Figure 9 describes the timing between doses for Milwaukee County residents who received Pfizer or Moderna vaccines. This graph includes data for residents who received their first dose of Pfizer or Moderna at least 42 days ago (prior to April 18, 2021). The recommended interval for receiving the second dose is 21 days for the Pfizer vaccine and 28 days for the Moderna vaccine; the second dose is considered valid if administered 4 days prior to the recommended interval and up to 42 days following the first dose for each vaccine.

Fully 93.3% of all residents who received their first dose of Pfizer prior to April 18, 2021 received their second dose within 42 days, indicating very strong completion within guidelines for those receiving a first dose.

Summary of vaccine series completion rates for Milwaukee County Pfizer and Moderna recipients

Table 1 summarizes the rates of vaccination series completion (Pfizer and Moderna 2-dose series) by groups based on vaccine received, age, sex, and race/ethnicity. This table includes data for residents who received their first dose of Pfizer or Moderna at least 42 days ago (prior to April 18, 2021); 42 days is the maximum recommended period for receiving the second dose. Variation across groups exists, but is relatively minor, with the exception of a small group with unknown sex.
